

EDRIAN ALDRIN C. MARIÑAS

JUNIOR SOFTWARE DEVELOPER

edrian.a.marinhas@gmail.com | +63 985 470 3444 | Metro Manila, PH

[linkedin.com/in/edrian-a-marinhas](https://www.linkedin.com/in/edrian-a-marinhas) | github.com/edrian-a-marinhas | Portfolio: edrian-marinhas.vercel.app

Professional Summary

Software Developer with strong expertise in Python and FastAPI. Skilled in building secured RESTful APIs on a scalable backend, deploying services via AWS cloud, and maintaining data integrity while optimizing performance across full stack.

Technical Skills

Back-end: Python, FastAPI, Django, Node.js, Express.js, REST API, Celery, SQLAlchemy, Alembic, AI/ML, LangChain, pandas, scikit-learn, PyTorch, Pytest, WebSocket, Webhooks

Front-end: TypeScript, React.js, TanStack (Query, Router, Table), Zod, JavaScript, HTML/CSS, TailwindCSS, Vite

Database: PostgreSQL, pgvector, SQL, Redis, MongoDB, NoSQL, MySQL, Supabase

Tools: AWS (EC2, RDS, S3, IAM, ALB, SQS), Git, GitHub Actions (CI/CD), Docker, Postman, CLI/Linux

Concepts: Performance Optimization, Redis and Client-Side Caching, OAuth(JWT), CORS, LLM API Integration, RAG

Experience

Full Stack Developer Intern (500 hours)

CertiCode | Mar 2026 – June 2026

- Improved backend API response latency and database query performance by 22% via Redis caching/indexing, and 13% via pagination and async/Celery task offloading.
- Built REST API endpoints across core features, including CRUD operations, RBAC and multi-step forms primarily in FastAPI, with contributions in Django and Express.js apps.
- Connected backend REST API data to the frontend UI, solving data mismatch issues across both layers.
- Ran manual endpoint testing via Postman and automated unit tests before every push through CI/CD.

Projects

SiteSync — Construction Site Management Platform — RBAC | Full-Stack Developer | July 2026

getsitesync.vercel.app | FastAPI, PostgreSQL, MongoDB, AWS (EC2, RDS, S3, SQS), Redis, Celery, React, TanStack

- Designed 77 REST endpoints across 16 database tables in a monolithic FastAPI backend with SQLAlchemy/Alembic.
- Redis-backed response caching layer with pattern-based invalidation on updates, reducing redundant database hits.
- Built a LangChain, pgvector RAG assistant and trained 3 ML models on 2,955+ seeded logs to forecast project risk.
- Deployed via Dockerized AWS EC2 with CI/CD pipeline running 492 pytest tests at 91% coverage before deploy.

Skylink — Flight Booking & Reservation Management — RBAC | Full-Stack Developer | June 2026

skylink-ph.vercel.app | FastAPI, PostgreSQL, Redis, Render, Supabase, React, TanStack Query

- Structured 65 REST endpoints across 15 database tables with a Redis caching layer using pattern-based invalidation.
- Enforced RBAC at both the API endpoint and frontend level, restricting all admin features from passenger access.
- Trained ML models for revenue forecasting, demand prediction, and cancellation risk scoring on historical data.

TransacScope — Business Finance Management — RBAC | Full-Stack Developer | Apr 2026

transacscope.vercel.app | FastAPI, PostgreSQL, Render, Supabase, React, TanStack Query

- Architected 39 REST endpoints across 11 database tables, managing 1,000+ transactions across 3 role tiers.
- Integrated a RAG-based AI financial assistant with role-aware scoping and session-scoped context caching.
- Enforced a deletion approval workflow staff request deletions, admins approve or decline, with full audit history.

Education

B.S. Information Technology – Our Lady of Fatima University (2022 – 2026)

Certifications

- IT Specialist – Python | Certiport (2026)
- Python Essentials 1 & 2 | Cisco NetAcad (2024)
