Professional Summary

Full Stack Developer internship experience, strong expertise in Python and FastAPI. Skilled in building secure REST APIs on scalable backend monolithic architecture, deploying via AWS, and maintaining end-to-end data integrity across the full stack while optimizing performance throughout. Comfortable integrating AI RAG using LangChain and pgvector pipelines.

Technical Skills

Back-end: Python, FastAPI, REST APIs, SQLAlchemy, Alembic, Celery, AI (RAG), LangChain, ML/Analytics, Pytest, Webhooks, WebSocket

Front-end: TypeScript, React.js, TanStack (Query, Router, Table), Zod, TailwindCSS, Vite

Database: PostgreSQL, pgvector, SQL, Redis, MongoDB, NoSQL, MySQL, Supabase

Tools: AWS (EC2, RDS, S3, IAM, ALB, SQS), Git, GitHub Actions (CI/CD), Docker, Postman, CLI/Linux, Caddy

Concepts: Performance Optimization, Redis and Client-Side Caching, Data Validations, OAuth(JWT), CORS, LLM API

Experience

Full Stack Developer Intern (500 hours)

SupSoft Tech | Mar 2026 – June 2026

- Solved issues spanned both frontend and backend, developing a habit of verifying data at its source.
- Reduced backend and database load using end-to-end caching, database indexing, and pagination.
- Reviewed our org's established codebases with seniors, learning to maintain and scale growing projects.
- Enforced access control at the API level, securing endpoints against direct requests and bypass attempts.
- Validated data at every layer end-to-end to prevent invalid or inconsistent data from reaching the db.
- Ran automated and manual tests before every push, with QA reviewing PRs before merge through CI/CD.

Projects

SiteSync — Construction Site Management Platform | Full-Stack Developer | July 2026

getsitesync.vercel.app

- Designed 77 REST endpoints across 16 database tables in a monolithic FastAPI backend with SQLAlchemy/Alembic.
- Integrated a Redis caching layer, Celery workers for background jobs, and real-time WebSocket backed by MongoDB.
- Built a LangChain + pgvector RAG assistant and trained 3 ML models on 2,955+ seeded logs to forecast project risk.
- Deployed via Dockerized AWS EC2 with CI/CD pipeline running 492 pytest tests at 91% coverage before deploy.

Skylink — Flight Booking & Reservation Management | Full-Stack Developer | June 2026

skylink-frontend-two.vercel.app

- Designed 65 REST endpoints across 15 database tables with modular routers/services/schemas architecture.
- Built a Redis caching layer with pattern-based invalidation and per-endpoint rate limiting with fallback.
- Trained ML models for revenue forecasting, prediction, and cancellation risk scoring on 986 seeded bookings
- Built a role-gated React frontend with caching and client-side validation to reduce unnecessary backend requests.

TransacScope — Role-Based Business Finance Management | Full-Stack Developer | Apr 2026

transacscope.vercel.app

- Developed 39 secured REST API endpoints across 11 database tables, managing 1,000+ transactions.
- Integrated a RAG-based AI financial assistant with role-aware scoping and session-scoped context caching.
- Implemented in-memory caching (TTL + invalidation), connection pooling, rate limiting, and Tanstack Query.

Education

Our Lady of Fatima University – B.S. Information Technology (2022 – 2026)

Certifications

IT Specialist – Python | Certiport, Pearson (2026)
